BUF Technology adds Fast Playlist and Looping to Popular Replay Controller
New firmware and keycap upgrade takes full advantage of video servers

San Diego, CA - August 29, 2002 - BUF Technology, "The Control Freaks" of the television industry announces "Sport" upgrade for their popular instant replay controller. The new VTS-5000-Sport offers users a very fast and easy to use method of playing video loops, playlists, and looping playlists. Sport is a no cost option for new orders, and is available as a \$300 upgrade for existing VTS-5000's.

Sport's software takes maximum advantage of Odetics protocol video servers from Fast Forward, Doremi Labs, Leitch, GVG/Thomson, Accom, and many more. For speed, up to one thousand video clips are referenced by number and marked with in and out timecode points. Playlists are quickly set up by assigning up to a hundred clips in any order. The operator can insert or delete clips as well as program still frame pauses at any time. With only two keystrokes, playout of any of ten playlists is instant. Individual clips or whole playlists can be played once or looped indefinitely.

About BUF Technology: The folks at BUF Technology are THE "Control Freaks" of the television and presentation industries! From high performance visual presentation control to instant replay officiating at pro football games to multi-camera production recording and playback at Hollywood's studios, you'll find BUF controllers in the hands of the professionals. BUF has many loyal clients that range from household names to the obscure. Why are they loyal? Because BUF consistently comes through for their largest as well as their smallest clients. Also because they consistently deliver within budget, on time, with better than expected performance, and above all, with supreme customer service. Whether you have a need for a standard product for control of high resolution video sources, videotape/videodisk recorders, or routing switchers or you need help controlling gear that just isn't controlled well by anyone else, give BUF a call and see for yourself why their customers speak so highly of them. The BUF Technology website is located at www.buftek.com.
