

BUFMC

Routing Switcher Control System

Uses: machine rooms, edit bays, trucks, cable head-ends, graphics suites

- Easy to use graphical user interface (GUI) for routing switcher control
- Equipment represented by pictorial icons - simple point-and-click routing
- Extensive salvo system stores and recalls partial or complete setups
- Controls multiple routers as one, even mixed brands - up to 32 levels
- Up to 64 control stations - does not affect existing control panels
- Uses inexpensive Win98/Me/2000/XP computers via RS-232 and/or network
- Fast, yet easy on system resources - no conflicts with other programs
- Hardware/software system uses multiple redundancy for high reliability
- Optional scheduling and logging features for automation and verification
